THURSDAY
DAILY DESCRIPTIONS

SANTA FE & SOUTH PLAZA ISLAND

GALAPAGOS
HABITAT | 1 |
(Departure)

(2 hours navigation
aprox.)

SANTA FE | 2 |

SOUTH PLAZA | 3 |

Created by lava that was uplifted from the sea bed, South Plaza has resident wildlife and diverse plant life.

Santa Fe Island, also called Barrington Island after British Admiral Samuel Barrington, is formed by uplifted, submarine basaltic lava, created some 4 million years' ago. A big part of this is a faulted plateau covered with a forest of giant *Opuntia* cactae.

What to see ?

The most spectacular plants are the giant prickly pear cactae, unique to Santa Fe (*Opuntia echios barringtonensis*). Galapagos dove, Galapagos hawk, Sea Lion nursery, land iguanas, marine iguanas. Birds such as blue-footed, nazca boobies, swallow-tailed gulls and tropical birds.

What to do?

Trekking

All meals included.
(Breakfast, lunch and dinner)
